---

Projects

Panther Den | React.js, Node.js | **Github** | Live(in development)   **Sole Developer**

Craigslist inspired private application with locally based authentication created for an upwork client

- Utilized React.Js, Node.js, Passport, and bcrypt to create a login system that hashes passwords before storing them to ensure security of users.
- Integrated SendGrid package to enable proper resetting of passwords.
- Upgraded basic CRUD methods to ensure users' posts cannot be deleted by anyone else but themselves, as well expire within a predetermined time-span

EverTech Games | Node.js, HTML, CSS | **Github** | **Live**   **Back End Developer/Project Manager**

Single Page application hosting a variety of simple Javascript based games as well as high scores

- Implemented Node.js Express server, established API routes, and created models to track high scores
  - Each JS was edited to work on a modal popup, as a result the site is very back-end heavy
  - Game's high scores were saved in SQL and displayed
- Google login API was used to enable users to login so their high scores could be associated with them

Eat, Drink, Cook | HTML, Javascript, REST api | **Github** | **Live**   **Full Stack Developer/Project Manager**

Multi-page Web Application utilizing 3 APIs to help user find a place to eat/drink or a recipe to cook.

- Integrated Bootstrap, CSS, and Javascript to enable user to search 3 different APIs
- Integrated Firebase to keep track of trending searches.
- Managed team of 4; assigning tasks, assisting with problems, and leading team meetings

---

Professional Experience

Freelance Web Developer   **April 2018- Present**

- Complete freelance contracts to clients' specifications
